JHOVANIE FLORES

Full-Stack Software Engineer

Davao City, Philippines (GMT+8) • +63 919 290 3551 (WhatsApp) • flores.jhovanie14@gmail.com

jhovanie.dev • github.com/jhovanie14

SUMMARY

Full-stack software engineer with nearly four years of professional experience designing, building and running production web applications end to end. Specialized in Laravel and Next.js with real-time systems (WebSockets, WebRTC), payments (Stripe, Square) and telephony (Telnyx). Recently built five live platforms solo, end to end: a two-sided training marketplace, a business phone system with an AI receptionist, a Square-integrated ordering and inventory platform, a car-detailing booking and point-of-sale system, and a car wash booking and membership platform. Writes tested code (1,300+ automated tests across recent projects) and uses AI-assisted development daily.

EXPERIENCE

Equals3 Remote

Full-Stack Web Developer Jul 2026 – Present

Aesthetic Training Hub *(aestheticstrainginghub.co.uk) — UK marketplace for vetted aesthetics training*

- Solo-built and launched a two-sided marketplace where vetted aesthetics trainers list courses and students search, enquire and book, delivering 70+ pages with Next.js 16, TypeScript, Tailwind CSS, shadcn/ui, Supabase, PostgreSQL and Drizzle ORM.
- Designed a three-role access model (student, trainer, admin) enforced with PostgreSQL Row Level Security, so each role can read and change only its own data.
- Implemented the platform's trust layer: every trainer is checked by a person against the GMC, NMC and GDC registers before going live, and reviews are accepted only from real bookings.
- Built town and postcode search with PostGIS, and monetized the platform with Stripe trainer subscriptions and booking commission, with transactional email through Resend.
- Designed mobile-first, as 70–80% of students browse on a phone; covered key journeys with Playwright end-to-end tests; deployed on Vercel, and continue to maintain and extend the platform.

Ledion AutoCare Remote

Full-Stack Software Engineer (Freelance) Jun 2026 – Present

Ledion AutoCare *(ledioncarcare.com) — booking, point of sale and accounting for a car-detailing shop*

- Solo-built and maintain one app that runs the shop's whole day, from online booking to the daily cash count, with Laravel 13, PHP 8.4, Inertia v3, React 19, TypeScript and MySQL, so nothing is re-typed between steps.
- Built six-step online booking priced by body type, with home-service travel fees worked out from the shop's distance (Photon address search and a map pin), Resend email and Semaphore SMS confirmations, and an SMS reminder 15 minutes before each slot.
- Built the staff side: a live queue (pending, confirmed, done), deposits, and a point of sale settling in cash, GCash, card or cheque, with products deducted from stock and each sale locked once billed.
- Built the books: every payment is its own record, cheques clear or bounce, expenses come off, and the day closes with the cash to remit; scheduled check-up and win-back SMS bring customers back.
- Secured staff sign-in with Laravel Fortify passkeys and two-factor authentication; covered by 499 automated tests (Pest) with Larastan static analysis; deployed with Coolify (Nixpacks) on DigitalOcean.

Hourglass Investment LLC Remote

Full-Stack Web Developer Aug 2025 – Jun 2026

Hourglass Mobile *— business phone system for the group's brands*

- Solo-architected and built a phone system that brings every brand line's calls, SMS/MMS and voicemail into one multi-inbox dashboard, using Next.js 16, React 19, TypeScript, Tailwind CSS, shadcn/ui and Supabase (Postgres, Auth, RLS, Realtime, Storage).
- Implemented ring-all routing on the Telnyx Voice API: each inbound call rings every available agent at once in the browser (WebRTC), in a Manifest V3 Chrome extension call panel, or on their phone via Firebase Cloud Messaging push.
- Configured a Telnyx AI Assistant as each brand's receptionist when nobody answers; it takes the caller's details and transfers to an agent who comes online.
- Stored dual-channel recordings and full transcripts against every call, posted a Slack hand-off note per call (reason, AI actions, outcome, risks), and exposed a signed, read-only events API for the group's other AI systems.

- Covered the system with 445 automated tests (Vitest) and shipped the Chrome extension through to v3.2; deployed on Vercel.

Bucket Baddie *(bucketbaddie.com) — online ordering and inventory for a Houston wing restaurant*

- Solo-built a live ordering platform with Laravel 13, PHP 8.5, Vue 3, TypeScript, Inertia v3 (SSR), Tailwind CSS and shadcn-vue that unifies online orders and in-store operations under one backend, across 45 screens of site and admin.
- Integrated the Square ecosystem (Payments, POS, self-service Kiosk, Kitchen Display System): checkout re-prices the cart on the server, enforces store hours, charges through Square and creates the kitchen's pick-up ticket automatically.
- Delivered live order tracking over Laravel Reverb WebSockets, driven by signed Square webhooks, with a fallback re-check when a broadcast is missed.
- Processed every Square sale and refund, from the website or the till, as idempotent Laravel Horizon jobs feeding recipe-based inventory: a stock ledger, variance-checked stock counts and an owner usage report.
- Covered the platform with 357 automated tests (Pest); containerized with Docker and deployed on DigitalOcean.

The Launchpad Wash *(thelaunchpadwash.com) — booking, membership and store platform for a Houston car wash*

- Solo-built the car wash's complete digital platform for drivers, staff and fleet customers with Next.js 16, React 19, TypeScript and Supabase, totalling 67 pages and 51 API routes and replacing a manual booking process.
- Integrated Stripe for one-off detail bookings, recurring unlimited memberships and store checkout, with idempotent webhook handling for transactional consistency.
- Built a customer dashboard for bookings and order tracking, and an admin console for the day's schedule, fulfilment and refunds; gave the store its own theme scoped to one route.
- Automated transactional email with Resend; deployed on Vercel behind Cloudflare; unit-tested with Vitest.

Aero IDX Remote
Software Developer Feb 2025 – Jun 2025

- Shipped backend and frontend modules with Laravel, Vue.js, Inertia.js and Tailwind CSS as part of an agile development team.
- Built dynamic interfaces and API logic that kept server-side business rules and client-side components cleanly separated and modular.

University of Mindanao Davao City, Philippines
College Instructor Jul 2024 – Dec 2024

- Taught hands-on courses in PHP, Laravel, MySQL and introductory Python, and designed capstone projects modelled on industry practice.
- Brought Git version control into class projects and mentored students through full project lifecycles, sharpening the ability to explain technical decisions to non-technical audiences.

RAG IT Solution Davao City, Philippines
Junior Software Developer May 2023 – Jun 2024

- Developed and maintained production client websites with Vue.js and REST API integrations.
- Contributed to Laravel Passport authentication for secure, token-based API access alongside senior backend developers.

EDUCATION

University of Mindanao Davao City, Philippines
Bachelor of Science in Information Technology 2017 – 2024

SKILLS

Languages: PHP, TypeScript, JavaScript, SQL, Python, HTML, CSS

Frameworks: Laravel, Next.js, React, Vue.js, Inertia.js, Node.js, Express, Tailwind CSS, shadcn/ui, shadcn-vue

Auth & security: Laravel Fortify (passkeys, 2FA), Supabase Auth, PostgreSQL Row Level Security, Laravel Passport

Data: PostgreSQL, MySQL, Supabase (Row Level Security, Realtime, Storage), Drizzle ORM, PostGIS, schema design

Real-time & queues: Laravel Reverb (WebSockets), Laravel Horizon, Supabase Realtime, WebRTC

Integrations: Stripe, Square (Payments, POS, Kiosk, KDS), Telnyx (Voice, SMS, AI Assistant), Semaphore SMS, Photon, Firebase Cloud Messaging, Slack, Resend, Twilio

Testing & quality: Pest, Vitest, Playwright, Larastan

DevOps: Docker, Coolify, Nixpacks, Vercel, Cloudflare, DigitalOcean, VPS management, Git/GitHub, CI/CD, Supabase Edge Functions

AI tooling: Claude and Cursor for daily AI-assisted development, architecture review and code quality
